30 Oct - 2 Nov 2013

Friday, 8 February 2013

Dear Colleagues,

We are pleased to inform you that the renowned Reading Advanced Shoulder Course will be held once again on 30th October to 2nd November 2013 at the Royal Berkshire Conference Centre, Millennium Madejski Hotel Reading.

The Reading Shoulder Course was one of the first worldwide shoulder courses running since 1982, established by Mr Stephen Copeland.

With constant advances in arthroscopic and arthroplasty techniques, instruments and implants, there is a continuous need to learn and improve our skills with novel techniques. Yet, it is as important to adhere to the basics of assessment and diagnosis, patient selection and selection of the right operation for the right patient.

We are organising an exciting programme with outstanding international faculty for this course. In each day of the course 3 live surgery procedures by different surgeons will take place, which will include arthroscopic and arthroplasty procedures. The whole spectrum of shoulder problems will be discussed, from assessment and diagnosis, treatment options and surgical techniques to biological treatment and future options. There will be lectures and clinical demonstrations, discussions and debates with interactive participation of faculty and delegates. There will be practice sessions of the different techniques in workshops held as a satellite symposia by the sponsoring companies and an exhibition where the companies will present their devices, techniques and innovations.

On the 2nd November 2013, we plan to hold an extra course day with cadaveric practical lab, for a limited number of delegates.

We hope to have a very stimulating interactive course which will raise discussions and debate and will enrich our knowledge and skills.

Places are limited and we suggest early registration (there is a substantial early-bird registration discount).

Please follow our website for updates: www.readingshoulderunit.com

We look forward to see you in Reading in October.

Prof. Ofer Levy MD MCh(Orth) FRCS
